

# Addressing challenges in the Kaipara catchment

## SEDIMENT FLOWS

Sediment flowing into the harbour is estimated to be up to 7 times higher than before human settlement.

## REDUCE SOIL EROSION

Planting and stabilising hillsides by planting the right tree in the right place.

## IMPROVE FARM PRACTICES

Restoring and constructing wetlands to capture sediment and filter water, excluding stock from waterways and planting.

## MANAGING URBAN WATER

Improving waste and stormwater management and reducing impacts on urban waterways.

## RECREATION VALUES

Helping ensure it is safe to swim and for communities to gather shellfish in the harbour.

## KAIMOANA

The majority of adult snapper on the west coast North Island population likely originated from the Kaipara Harbour.
